DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-16, 18-34, 36-41 and 43-48 are rejected under 35 U.S.C. 102(a) as being anticipated by Ferraro et al (WO 99/26847).

There is disclosed in Ferraro a food container comprising: a side wall 14 forming an upper opening; a bottom wall 16 connected to the side wall opposite the upper opening; a flange body extending downwardly from the bottom wall, the flange body defining an inner surface, formed by a plurality of steps 22, and an outer surface, the inner surface being configured for selective attachment to a beverage container 12, the inner surface having a first vertical section and a second section expanding outwardly from the first section, wherein the side wall and the bottom wall define an internal storage region; a plurality of retention tabs 28 spaced along the inner surface; a slot 18 extending from the side wall to the bottom wall and through the flange body.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17, 35 and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ferraro in view of Brauner et al.

Brauner teaches the use of a protective film secured across an upper opening of a food container. It would have been obvious to one skilled in the art to provide the container of Ferraro with the protective film taught by Brauner, in order to allow storage of food items within the container without said food items going bad.
